gabriel.caravaca9@gmail.com

San José, Costa Rica

PROFFESIONAL PROFILE

Full-stack software engineer, specialized in Bootstrap, JavaScript, C#, C++, and SQL, with skills in interface design, backend development, and database management.

EDUCATIONAL EXPERIENCE

2023 Q4

San José-Costa Rica

Tourism Web Application Project: Solo Travelers

Position: Coordinator

Description:

Creation of a website focused on the tourism sector. This site was developed with minimal backend, consisting mainly of pure frontend. The database was managed in MongoDB to handle users. Version control was done on GitHub, and team management was handled in Asana.

2023 Q4

San José-Costa Rica

Database Project for QTV: Streaming System

Position: Co-creator

Description:

The objective was to design and build a database model for the QTV application, which manages digital content such as movies, series, and documentaries for annual subscription clients. The work included creating an Entity-Relationship Diagram (ERD), converting it to a Relational Model (DBD), and developing the database in Oracle SQL along with a detailed report.

2024 Q1

San José-Costa Rica

Hospital Web Application Project: Your Health First

Position: QA

Description:

Creation of a website focused on the medical sector. Unlike Solo Travelers, this site was developed with a more extensive backend in C#, along with a database in Microsoft Azure. Additionally, version control and team management were also done in Azure.
